Mono Dyslexic

Do you find this easy to read? If you do it is because this is a new font based on recent research into Dyslexia. It is designed to help dyslexics by reducing the symmetry in the letters and by adding weight to the base line.

Dyslexics have super abilities in flipping and turning images in their heads. That's sometimes why they have difficulty differentiating other typefaces that have many symmetrical letters.

Mono Dyslexic

What is the missing link

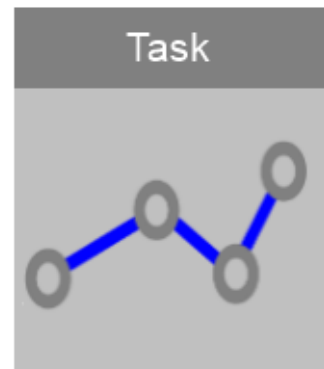

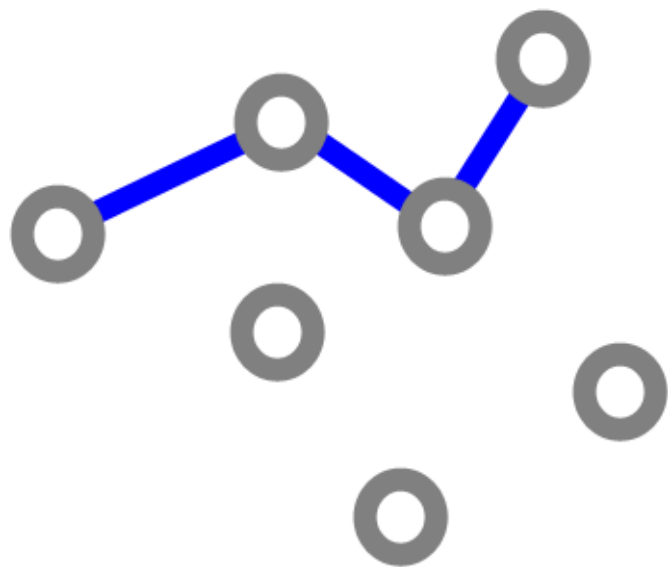

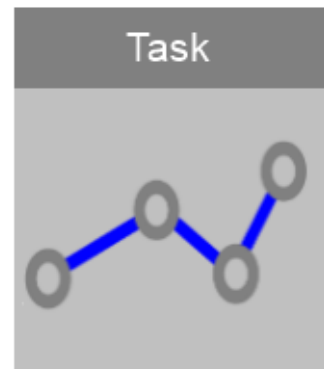

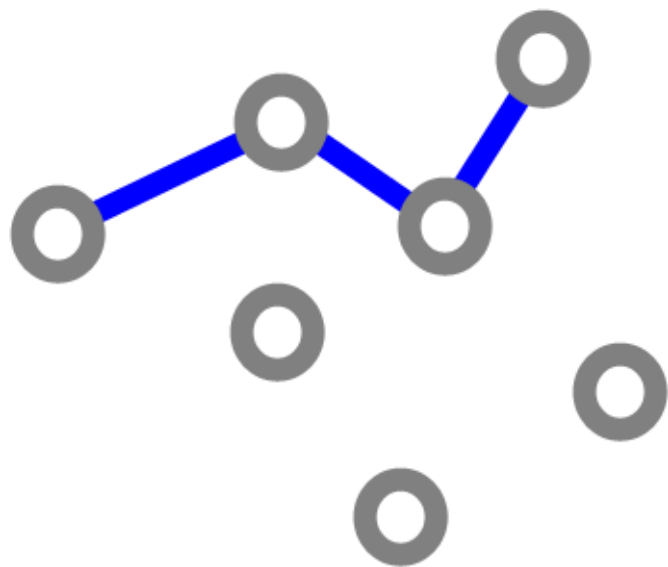

Assignment 2

ABC's

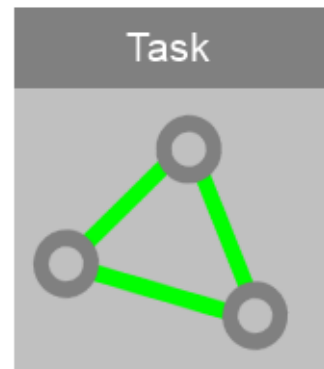

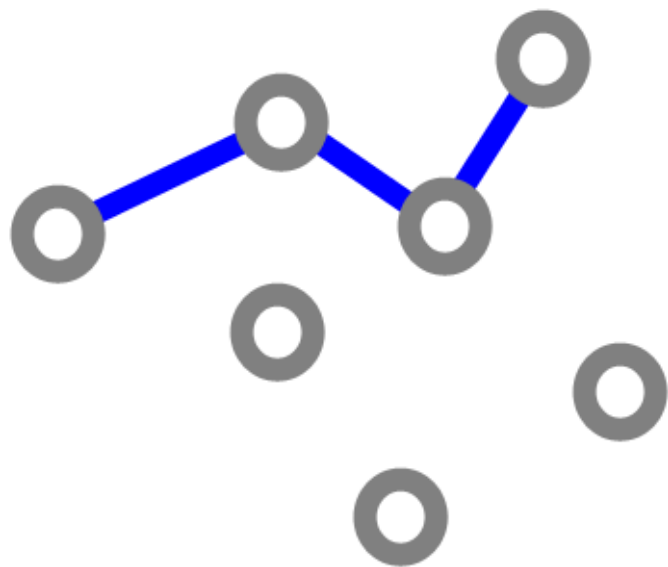

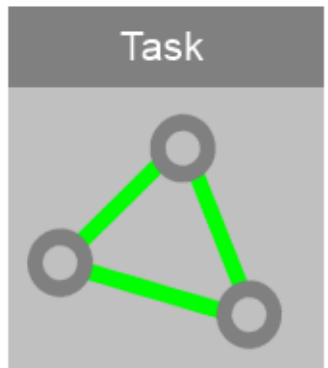

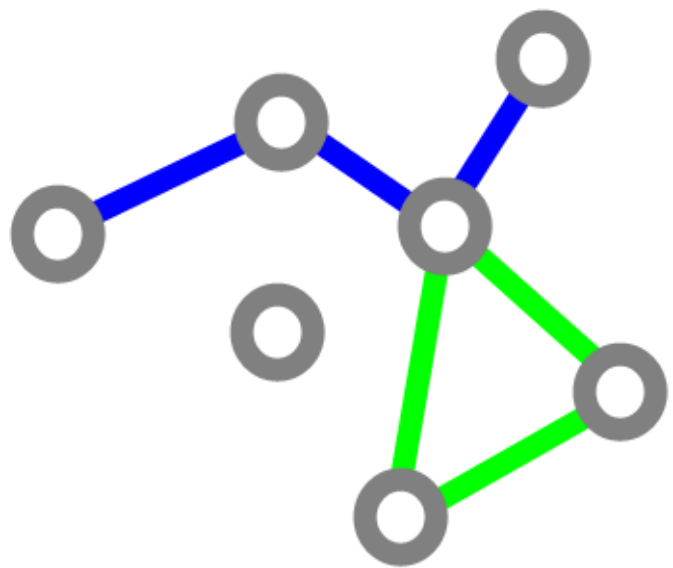

Building a good start

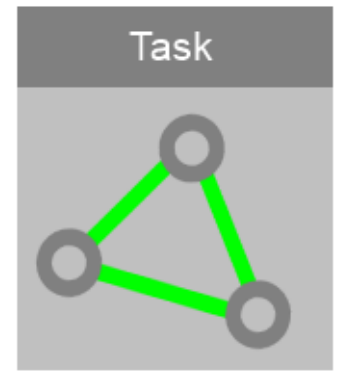

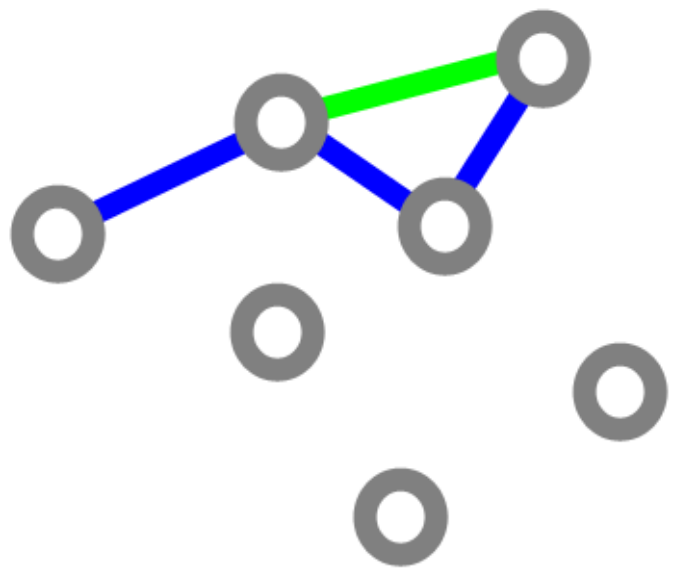

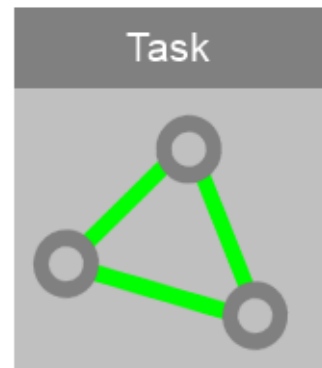

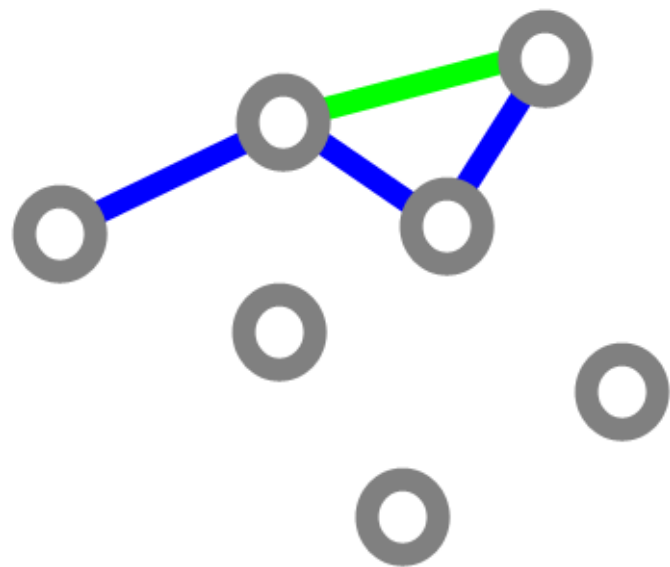

Assignment 3

SA

Learning smarter

Assignment 4

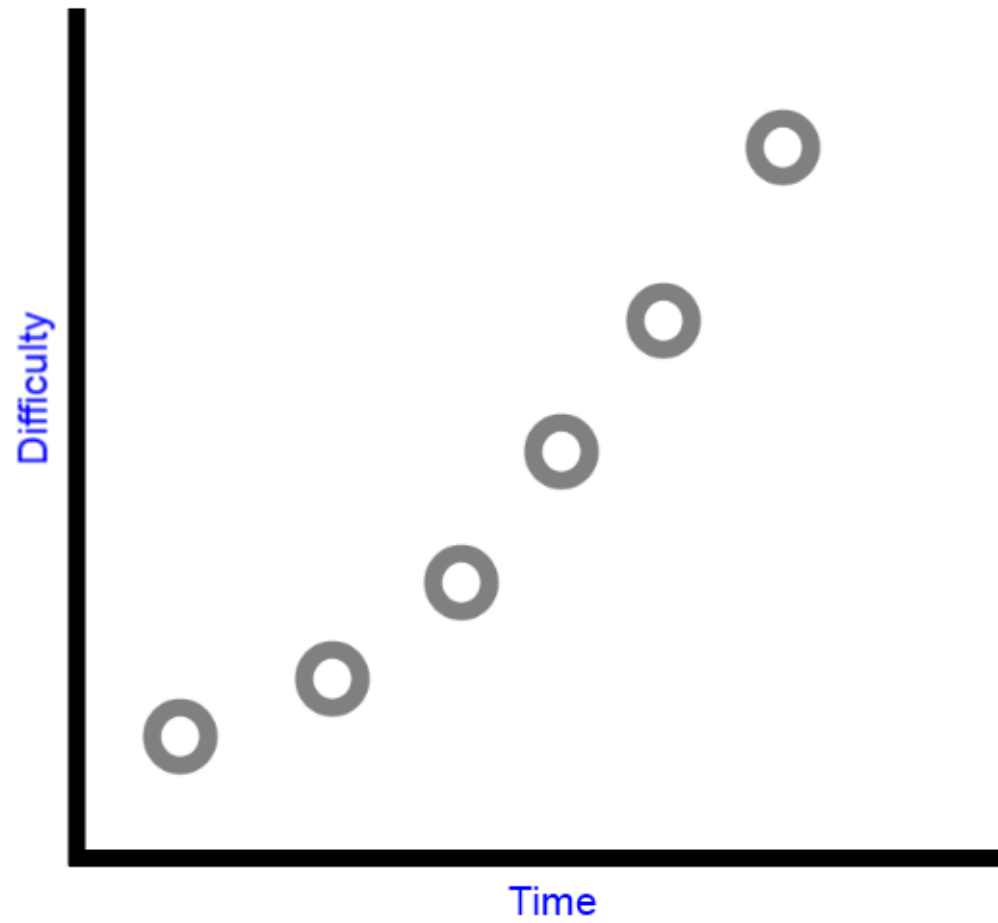

O-L-L-E-H

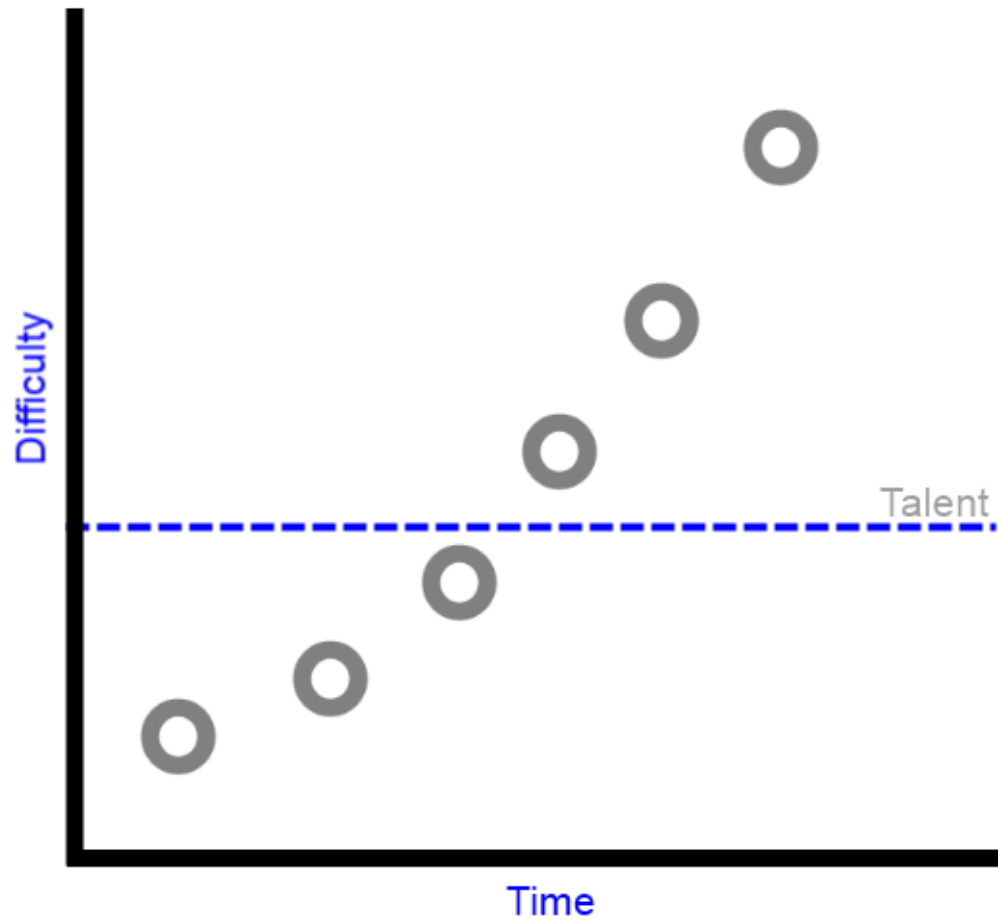

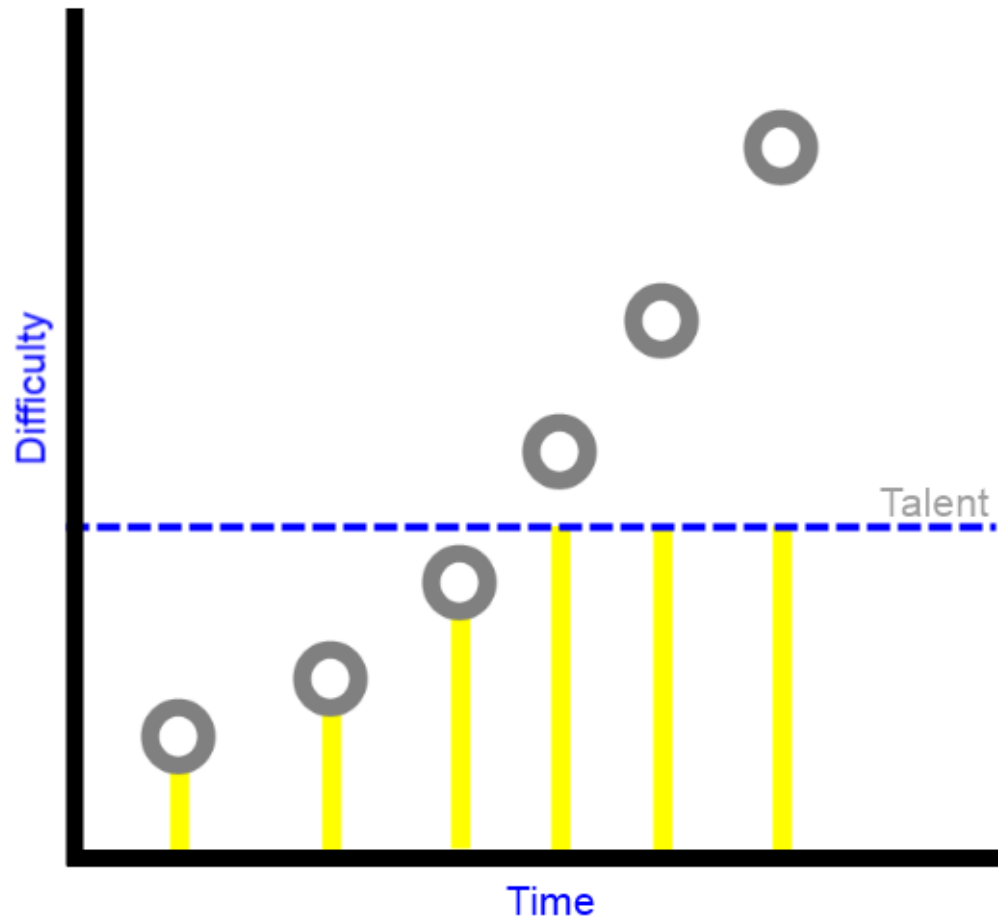

A blank coordinate system with two axes. The vertical axis is labeled 'Difficulty' and the horizontal axis is labeled 'Time'. Both axes are represented by thick black lines. The labels are in a blue font and are positioned near the ends of their respective axes.

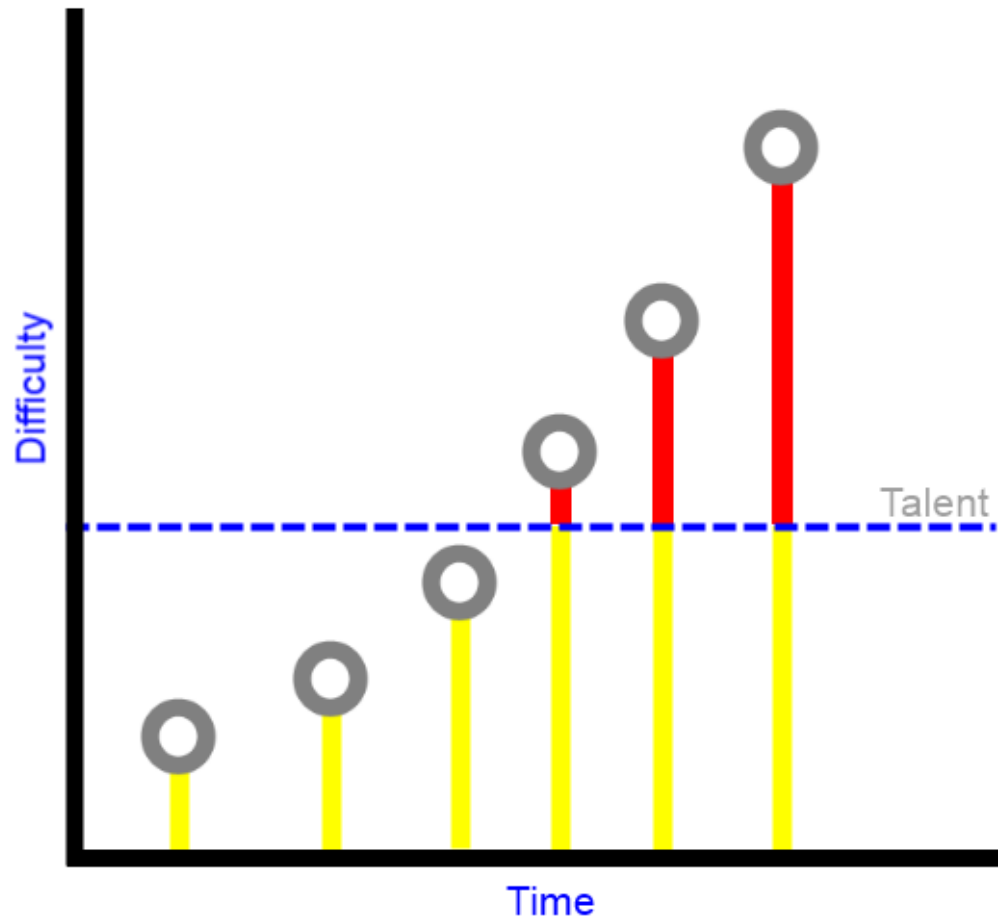

Difficulty

Time

Assignment 5

OL-LEH

WHAT IS Dyslexia?

1% of corporate managers are dyslexic

35% of entrepreneurs are dyslexic

Over half of the UK population has a very limited understanding of dyslexia and think it's just about getting letters back to front.

20% believe dyslexics would do better if they just worked HARDER

This is not True

Dyslexia is about abilities being out of balance

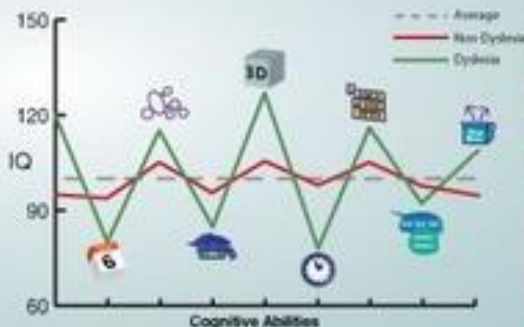

While dyslexics may struggle with:

- Organisational skills
- Planning and prioritising
- Time keeping
- Background noise

They may be brilliant at:

- Connecting ideas
- Thinking outside the box
- 3D dimensional thinking
- Seeing the big picture

Dyslexia is NOT tied to IQ

Your overall IQ can be anywhere in the range. The key difference is the spikes in the profile

It is estimated that

1 IN 10

people have dyslexia

Einstein was dyslexic
IQ = 160*

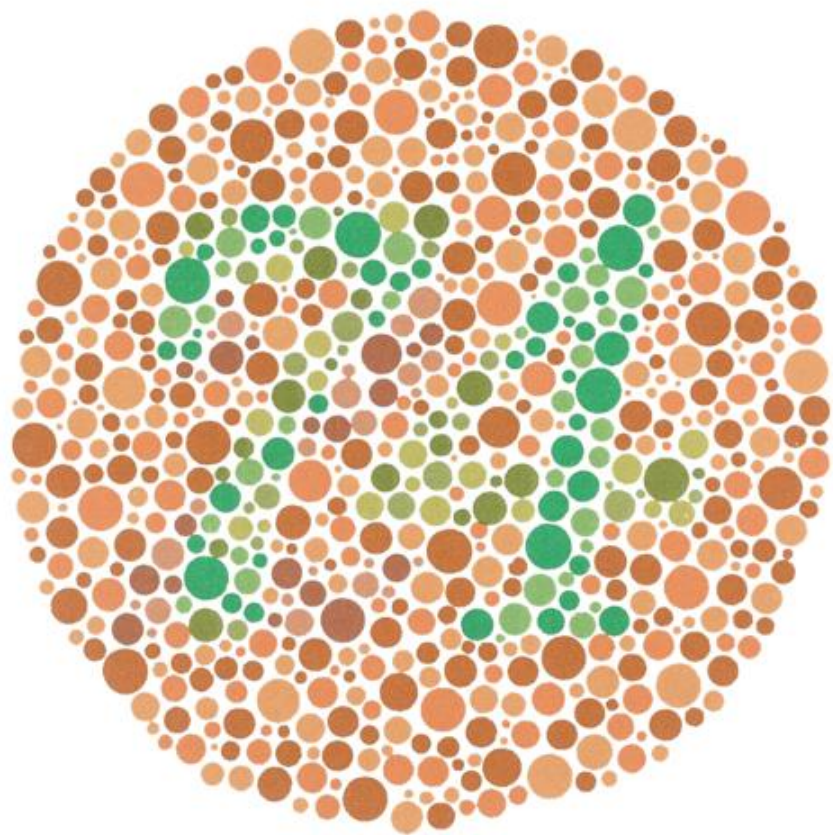

*estimated

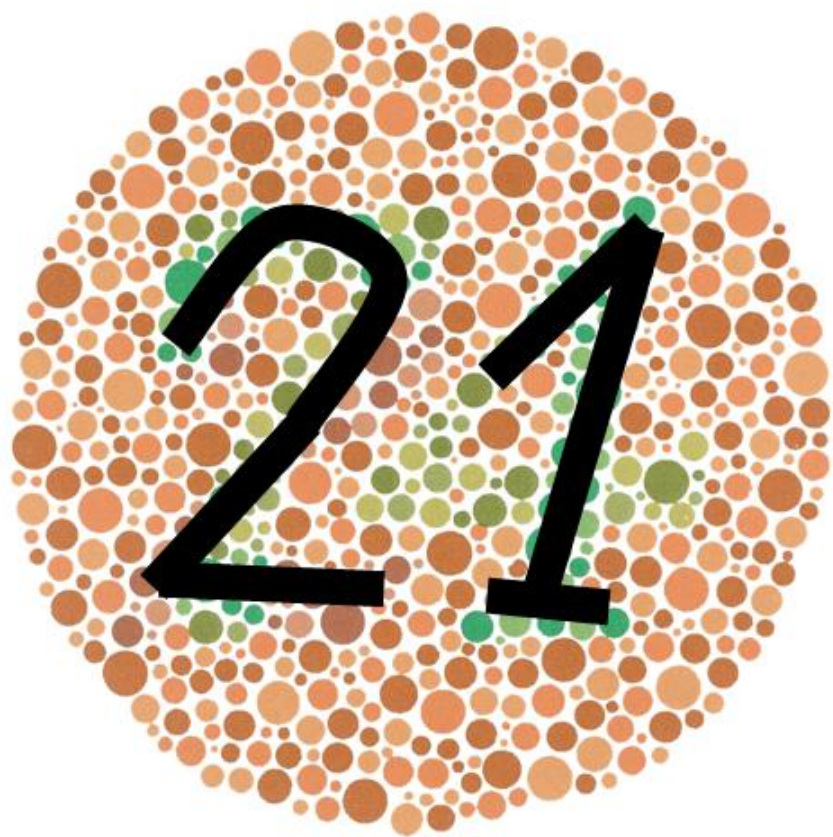

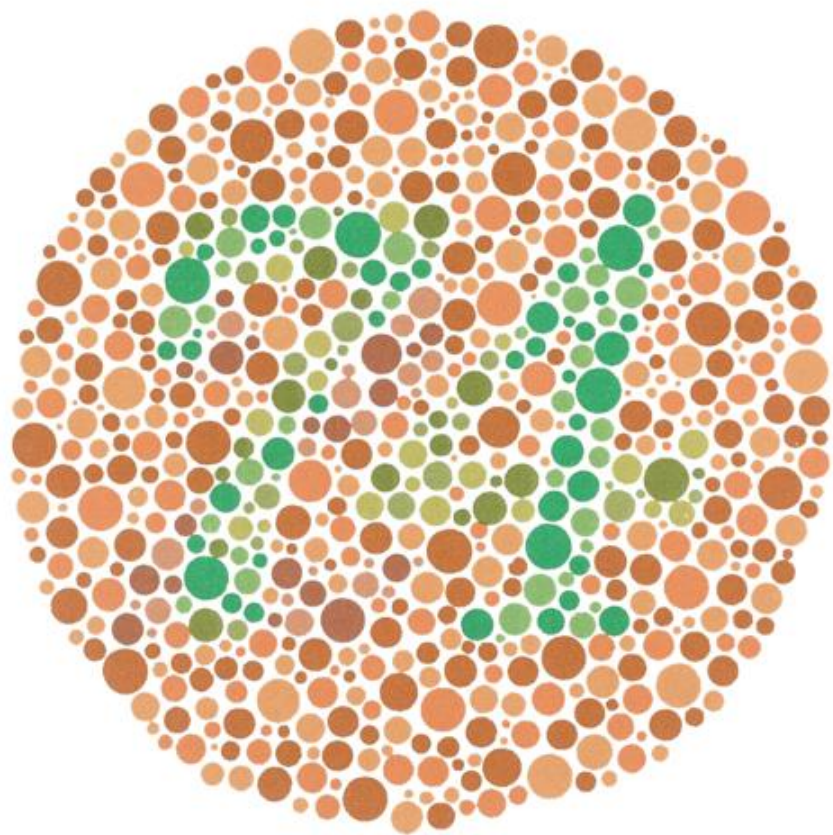

Unlock your hidden genius by compensating for your weak points and learning to play to your strengths
